Journal of Materials Processing Technology

www.elsevier.com/locate/jmatprotec

Subject Index of Volume 107

Accessibility analysis
A feature-based inspection process planning system for co-ordinate measuring machine (CMM), 111
Aerospace manufacturing
A feature model editor and process planning system for sheet metal products, 88
Affine transformation
An energy based model for the flattening of woven fabrics, 312
Agent coordination
Formal specification of a multi-agent system architecture for manufacture: the contribution of the π-calculus, 209
Agents
A generic coordination approach applied to a manufacturing environment, 404
Aggregate process planning
An integrated design and planning environment for welding. Part 2: Process planning, 9
Agility
Achieving agility using cladistics: an evolutionary analysis, 338
Analytical hierarchy process
Evaluation methodologies for technology selection, 330
Artificial intelligence
A knowledge cell approach to processing design information, 44
Integration of a knowledge-based system, artificial neural networks and multimedia for gear design, 53
Assembly
Electronically networked assembly systems for global manufacturing, 319
Automotive suppliers
Implementation of concurrent engineering in the suppliers to the automotive industry, 201

Blackboard
A blackboard-based negotiation for collaborative supply chain system, 398
BTA deep hole drilling
The investigation on the machining process of BTA deep hole drilling, 222

Cable harness design
Designing cable harness assemblies in virtual environments, 37
CAD
Dedicated 3D CAD for garment modelling, 31
A knowledge cell approach to processing design information, 44
A concurrent engineering approach to the development of a scroll compressor, 194
CAD model
CAD-based triangulation of unordered data using trimmed NURBS models, 60
CAD modelling
Extracting geometric features from a virtual environment, 24
CAD/CAM
Feature modelling: a validation methodology and its evaluation, 15
A feature model editor and process planning system for sheet metal products, 88
Application and evaluation of VR-based CAPP system, 153
Design and manufacture of anatomical hip joint endoprostheses using CAD/CAM systems, 181
Expert system of cold forging defects using risk analysis tree network with fuzzy language, 260
Computer applications in unconventional machining, 276
CAD/CAM/CAE
Implementation of concurrent engineering in the suppliers to the automotive industry, 201
CAD/CAPP
Feature modelling: a validation methodology and its evaluation, 15
CAE
Feature modelling: a validation methodology and its evaluation, 15
π-Calculus
Formal specification of a multi-agent system architecture for manufacture: the contribution of the π-calculus, 209
CAM
A concurrent engineering approach to the development of a scroll compressor, 194
CAM system
A new approach to CAM systems development for small and medium enterprises, 173
Capacity planning and scheduling
Controlling and monitoring functions as supplement to MRPXX-systems, 439
CAPP
An integrated design and planning environment for welding. Part 1: Product modelling, 3
An integrated design and planning environment for welding. Part 2: Process planning, 9
A feature model editor and process planning system for sheet metal products, 88
Application and evaluation of VR-based CAPP system, 153
Chip deformation
The investigation on the machining process of BTA deep hole drilling, 222
CIM
Computer applications in unconventional machining, 276
Cladistics
Achieving agility using cladistics: an evolutionary analysis, 338
Classification
Achieving agility using cladistics: an evolutionary analysis, 338
Clustering algorithm
A feature-based inspection process planning system for co-ordinate measuring machine (CMM), 111
CNC
Computer applications in unconventional machining, 276
CNC machine tool
Design and manufacture of anatomical hip joint endoprostheses using CAD/CAM systems, 181

Elsevier Science B.V.
PII: S0924-0136(00)00867-0

Coatings
Decision support system to optimise the Frictec (friction surfacing) process, 236
Coded light approach
An approach to computer-aided quality control based on 3D coordinate metrology, 96
Cold forging
A method for the simulation of temperature stabilisation in the tools during multi-cycle cold-forging operations, 252
Expert system of cold forging defects using risk analysis tree network with fuzzy language, 260
Collaborative product development
Synchronized system for "Design for X" guidelines over the WWW, 71
Collaborative supply chain system
A blackboard-based negotiation for collaborative supply chain system, 398
Communication
Corporate ontologies and concurrent engineering, 187
Complex adaptive system
Manufacturing competitiveness and fitness landscape theory, 347
Component-based architecture
A new approach to CAM systems development for small and medium enterprises, 173
Compressor
A concurrent engineering approach to the development of a scroll compressor, 194
Computer aided design
Integration of tool selection with design. Part 1. Feature creation and selection of operations and tools, 127
Computer-aided process planning
Integration of tool selection with design. Part 1. Feature creation and selection of operations and tools, 127
Integration of tool selection with design. Part 2: Aggregate machining time estimation, 135
Computer simulation
CAE-ECM system for electrochemical technology of parts and tools, 293
Computer-aided manufacturing
An approach to computer-aided quality control based on 3D coordinate metrology, 96
Computer-aided quality control
An approach to computer-aided quality control based on 3D coordinate metrology, 96
Concurrent engineering
An integrated design and planning environment for welding. Part 1: Product modelling, 3
Corporate ontologies and concurrent engineering, 187
A concurrent engineering approach to the development of a scroll compressor, 194
Implementation of concurrent engineering in the suppliers to the automotive industry, 201
Condition monitoring
A new approach for systematic design of condition monitoring systems for milling processes, 243
Coordinate measurement
An approach to form deviation evaluation for CMM measurement of 2D curve contours, 119
Co-ordinate measuring machines
A feature-based inspection process planning system for co-ordinate measuring machine (CMM), 111
Coordination
A generic coordination approach applied to a manufacturing environment, 404
Cutting
Satisfying various requirements in different levels and stages of machining using one general ANN-based process model, 228
Cutting condition
An expert system of machining operation planning in Internet environment, 160
Cutting force
The investigation on the machining process of BTA deep hole drilling, 222
3D coordinate metrology
An approach to computer-aided quality control based on 3D coordinate metrology, 96
2D curve contour
An approach to form deviation evaluation for CMM measurement of 2D curve contours, 119

DC servo-motor
Over-rated drive of robots and its evaluations, 307
Decision support systems
Decision support system to optimise the Frictec (friction surfacing) process, 236
A component-based approach to support order planning in a distributed manufacturing enterprise, 431
Design for X
Synchronized system for "Design for X" guidelines over the WWW, 71
Design integration
Integration of a knowledge-based system, artificial neural networks and multimedia for gear design, 53
DFM
An integrated design and planning environment for welding. Part 1: Product modelling, 3
An integrated design and planning environment for welding. Part 2: Process planning, 9
Diffractive optics
A novel high-accuracy microstereolithography method employing an adaptive electro-optic mask, 167
Discrete event simulation
A methodology for evaluation of process and production planning, 79
Discrete-event simulation
Simulation as an essential tool for advanced manufacturing technology problems, 412
Distributed computing object
A component-based approach to support order planning in a distributed manufacturing enterprise, 431
Distributed enterprise
A component-based approach to support order planning in a distributed manufacturing enterprise, 431
Distributed manufacturing
A new approach to CAM systems development for small and medium enterprises, 173
Distributed planning
Fine planning for supply chains in semiconductor manufacture, 390
Draping
Dedicated 3D CAD for garment modelling, 31

Elasto-viscoplastic material
Modelling wall boundary conditions in an elasto-viscoplastic material forming process, 267
Electrochemical machining
The computer aided simulation of electrochemical process with universal spherical electrodes when machining sculptured surfaces, 283
CAE-ECM system for electrochemical technology of parts and tools, 293
Direct and inverse problems of shaping by electrochemical generating machining, 300

Electrochemical smoothing
The influence of electrode surface geometrical structure on electrochemical smoothing process, 288
Electrode design
CAE-ECM system for electrochemical technology of parts and tools, 293
End milling
A new approach for systematic design of condition monitoring systems for milling processes, 243
Endoprosthesis
Design and manufacture of anatomical hip joint endoprostheses using CAD/CAM systems, 181
Engineering multimedia
Integration of a knowledge-based system, artificial neural networks and multimedia for gear design, 53
Engineering simulation
Application and evaluation of VR-based CAPP system, 153
Envelope motion
Direct and inverse problems of shaping by electrochemical generating machining, 300
Evolution
Achieving agility using cladistics: an evolutionary analysis, 338
Experimental verification
CAE-ECM system for electrochemical technology of parts and tools, 293
Expert system
An expert system of machining operation planning in Internet environment, 160
Expert system of cold forging defects using risk analysis tree network with fuzzy language, 260

FE simulation
A method for the simulation of temperature stabilisation in the tools during multi-cycle cold-forging operations, 252
Feature identification
Extracting geometric features from a virtual environment, 24
Feature modelling
A feature model editor and process planning system for sheet metal products, 88
Feature-based design
Feature modelling: a validation methodology and its evaluation, 15
Fine planning
Fine planning for supply chains in semiconductor manufacture, 390
Finite element simulation
Modelling wall boundary conditions in an elasto-viscoplastic material forming process, 267
Fitness landscape theory
Manufacturing competitiveness and fitness landscape theory, 347
Flattening
Dedicated 3D CAD for garment modelling, 31
Flattening of woven fabrics
An energy based model for the flattening of woven fabrics, 312
Flexibility of FMS
The interactive process between some dispatching mechanisms and interrupted machine centers in FMSs, 466
Flexible machining cells
Machine loading algorithms for the elimination of tardy jobs in flexible batch machining applications, 450
Flexible manufacturing
Electronically networked assembly systems for global manufacturing, 319
Flexible manufacturing systems
The interactive process between some dispatching mechanisms and interrupted machine centers in FMSs, 466
FMS scheduling
The interactive process between some dispatching mechanisms and interrupted machine centers in FMSs, 466
Forging defects
Expert system of cold forging defects using risk analysis tree network with fuzzy language, 260
Form deviation evaluation
An approach to form deviation evaluation for CMM measurement of 2D curve contours, 119
Formal specification
Formal specification of a multi-agent system architecture for manufacture: the contribution of the π-calculus, 209
Friction surfacing
Decision support system to optimise the Frictec (friction surfacing) process, 236
Funnel model
Controlling and monitoring functions as supplement to MRPXX-systems, 439
Fuzzy cash flow analysis
Evaluation methodologies for technology selection, 330
Fuzzy logic
A new approach for systematic design of condition monitoring systems for milling processes, 243
Fuzzy multi-criteria decision making
Evaluation methodologies for technology selection, 330

Garment design
Dedicated 3D CAD for garment modelling, 31
Gears
Integration of a knowledge-based system, artificial neural networks and multimedia for gear design, 53
Globalization
Electronically networked assembly systems for global manufacturing, 319
GRAI analysis
Manufacturing planning within holistic strategic operations, 372
Grinding
Analysis of the transitional temperature for tensile residual stress in grinding, 216
Guidelines
Synchronized system for "Design for X" guidelines over the WWW, 71

Hardfacing
Decision support system to optimise the Frictec (friction surfacing) process, 236
Heat transfer analysis
A method for the simulation of temperature stabilisation in the tools during multi-cycle cold-forging operations, 252
Heuristic algorithm
Heuristic algorithm for scheduling in the no-wait flow-shop, 459
HMD
Designing an immersive virtual reality interface for layout planning, 425
Holistic
Manufacturing planning within holistic strategic operations, 372

$IDEF_0$ analysis
Manufacturing planning within holistic strategic operations, 372
Immersive virtual reality
Designing cable harness assemblies in virtual environments, 37
Information technology
"TeleService" a customer-oriented and efficient service?, 363
Inspection process planning
A feature-based inspection process planning system for co-ordinate measuring machine (CMM), 111
Intelligent agents
A blackboard-based negotiation for collaborative supply chain system, 398

Internet
Synchronized system for "Design for X" guidelines over the WWW, 71
A blackboard-based negotiation for collaborative supply chain system, 398
Interruptions in FMS
The interactive process between some dispatching mechanisms and interrupted machine centers in FMSs, 466

Job shop control
Controlling and monitoring functions as supplement to MRPXX-systems, 439

Know-how
An expert system of machining operation planning in Internet environment, 160
Knowledge
Knowledge-based engineering for SMEs — a methodology, 384
Knowledge base
A knowledge cell approach to processing design information, 44
Knowledge sharing
Corporate ontologies and concurrent engineering, 187
Knowledge-based engineering
Knowledge-based engineering for SMEs — a methodology, 384

Layout planning
Designing an immersive virtual reality interface for layout planning, 425
Lead-times
Simulation as an essential tool for advanced manufacturing technology problems, 412
Linguistic variables
Evaluation methodologies for technology selection, 330
Logistic operation curve
Controlling and monitoring functions as supplement to MRPXX-systems, 439
LSC
An approach to form deviation evaluation for CMM measurement of 2D curve contours, 119

Machine loading policies
Machine loading algorithms for the elimination of tardy jobs in flexible batch machining applications, 450
Machining
An expert system of machining operation planning in Internet environment, 160
Machining process model
Satisfying various requirements in different levels and stages of machining using one general ANN-based process model, 228
Maintenance
"TeleService" a customer-oriented and efficient service?, 363
Make or buy decision
A decision support framework for strategic purchasing, 353
Manufacturing
Formal specification of a multi-agent system architecture for manufacture: the contribution of the π-calculus, 209
Achieving agility using cladistics: an evolutionary analysis, 338
Manufacturing planning within holistic strategic operations, 372
Manufacturing cells
Designing an immersive virtual reality interface for layout planning, 425
Manufacturing strategy
Manufacturing competitiveness and fitness landscape theory, 347
Material removal processes
The influence of electrode surface geometrical structure on electrochemical smoothing process, 288
Material-removal processes
The computer aided simulation of electrochemical process with universal spherical electrodes when machining sculptured surfaces, 283
Mechanical design
Integration of a knowledge-based system, artificial neural networks and multimedia for gear design, 53
Methodology
Knowledge-based engineering for SMEs — a methodology, 384
Microstereolithography
A novel high-accuracy microstereolithography method employing an adaptive electro-optic mask, 167
Milling
A flexible tool selection decision support system for milling operations, 143
Model management system
Distributed model management system for material flow simulation, 478
Model reuse
Distributed model management system for material flow simulation, 478
Modelling
Manufacturing planning within holistic strategic operations, 372
Monitoring
Computer applications in unconventional machining, 276
Monitoring of order and material flow
Controlling and monitoring functions as supplement to MRPXX-systems, 439
Multi-agent system
Formal specification of a multi-agent system architecture for manufacture: the contribution of the π-calculus, 209
Multivariate statistics and decision-making
A methodology for evaluation of process and production planning, 79
MZC
An approach to form deviation evaluation for CMM measurement of 2D curve contours, 119

Negotiation techniques
A blackboard-based negotiation for collaborative supply chain system, 398
Neural networks
Satisfying various requirements in different levels and stages of machining using one general ANN-based process model, 228
Decision support system to optimise the Frictec (friction surfacing) process, 236
A new approach for systematic design of condition monitoring systems for milling processes, 243
Non-traditional processes
The computer aided simulation of electrochemical process with universal spherical electrodes when machining sculptured surfaces, 283
The influence of electrode surface geometrical structure on electrochemical smoothing process, 288
No-wait flow-shop
Heuristic algorithm for scheduling in the no-wait flow-shop, 459

OK model
Corporate ontologies and concurrent engineering, 187
OK station
Corporate ontologies and concurrent engineering, 187
Ontology
Corporate ontologies and concurrent engineering, 187
Open tender
A blackboard-based negotiation for collaborative supply chain system, 398

Operation planning
An expert system of machining operation planning in Internet environment, 160
Satisfying various requirements in different levels and stages of machining using one general ANN-based process model, 228
Over-rated drive
Over-rated drive of robots and its evaluations, 307

Part programming
Design and manufacture of anatomical hip joint endoprostheses using CAD/CAM systems, 181
Path generation
A feature-based inspection process planning system for co-ordinate measuring machine (CMM), 111
Planning
Manufacturing planning within holistic strategic operations, 372
Planning of production
Satisfying various requirements in different levels and stages of machining using one general ANN-based process model, 228
Process control
Computer applications in unconventional machining, 276
Process layouts and workflow
Simulation as an essential tool for advanced manufacturing technology problems, 412
Process planning
A flexible tool selection decision support system for milling operations, 143
Process planning and production planning
A methodology for evaluation of process and production planning, 79
Product modelling
An integrated design and planning environment for welding. Part 1: Product modelling, 3
Production planning and management
A component-based approach to support order planning in a distributed manufacturing enterprise, 431
Production scheduling
Machine loading algorithms for the elimination of tardy jobs in flexible batch machining applications, 450
Purchasing
A decision support framework for strategic purchasing, 353

Random data
CAD-based triangulation of unordered data using trimmed NURBS models, 60
Range imaging
CAD-based triangulation of unordered data using trimmed NURBS models, 60
Rapid prototyping
An approach to computer-aided quality control based on 3D coordinate metrology, 96
A novel high-accuracy microstereolithography method employing an adaptive electro-optic mask, 167
Rating
Over-rated drive of robots and its evaluations, 307
Residual stress
Analysis of the transitional temperature for tensile residual stress in grinding, 216
Resource management
A generic coordination approach applied to a manufacturing environment, 404
Resource utilisation and optimisation
Simulation as an essential tool for advanced manufacturing technology problems, 412
Robot
Over-rated drive of robots and its evaluations, 307

Scheduling
A generic coordination approach applied to a manufacturing environment, 404
Heuristic algorithm for scheduling in the no-wait flow-shop, 459
Segmentation
Extracting geometric features from a virtual environment, 24
Semantics
Corporate ontologies and concurrent engineering, 187
Sensory fusion
A new approach for systematic design of condition monitoring systems for milling processes, 243
Service
"TeleService" a customer-oriented and efficient service?, 363
Sheet metal fabrication
A feature model editor and process planning system for sheet metal products, 88
Simulation
Distributed model management system for material flow simulation, 478
Solid modelling
A concurrent engineering approach to the development of a scroll compressor, 194
Spatial light modulators
A novel high-accuracy microstereolithography method employing an adaptive electro-optic mask, 167
Strategy
Manufacturing planning within holistic strategic operations, 372
Supply chain management
A decision support framework for strategic purchasing, 353
Fine planning for supply chains in semiconductor manufacture, 390
Supply chain system
A blackboard-based negotiation for collaborative supply chain system, 398
Supply-chain management
A component-based approach to support order planning in a distributed manufacturing enterprise, 431
Synchronous
Synchronized system for "Design for X" guidelines over the WWW, 71

Taguchi's orthogonal arrays
A new approach for systematic design of condition monitoring systems for milling processes, 243
Technology selection
Evaluation methodologies for technology selection, 330
TeleService
"TeleService" a customer-oriented and efficient service?, 363
Temperature
Analysis of the transitional temperature for tensile residual stress in grinding, 216
A method for the simulation of temperature stabilisation in the tools during multi-cycle cold-forging operations, 252
Term meaning
Corporate ontologies and concurrent engineering, 187
Terminology
Corporate ontologies and concurrent engineering, 187
Throughput diagram
Controlling and monitoring functions as supplement to MRPXX-systems, 439
Tool selection
Integration of tool selection with design. Part 1. Feature creation and selection of operations and tools, 127
Integration of tool selection with design. Part 2: Aggregate machining time estimation, 135
A flexible tool selection decision support system for milling operations, 143

Triangular fuzzy numbers
Evaluation methodologies for technology selection, 330
Triangulation
CAD-based triangulation of unordered data using trimmed NURBS models, 60
Trimmed NURBS
CAD-based triangulation of unordered data using trimmed NURBS models, 60

Unconventional machining
Computer applications in unconventional machining, 276
Universal electrode
Direct and inverse problems of shaping by electrochemical generating machining, 300
Upsetting
Modelling wall boundary conditions in an elasto-viscoplastic material forming process, 267

Vibration assistance
Modelling wall boundary conditions in an elasto-viscoplastic material forming process, 267
Virtual Enterprise
Fine planning for supply chains in semiconductor manufacture, 390
Virtual environment
Extracting geometric features from a virtual environment, 24
Virtual reality
Application and evaluation of VR-based CAPP system, 153
Designing an immersive virtual reality interface for layout planning, 425

Wear
The investigation on the machining process of BTA deep hole drilling, 222
Welding
An integrated design and planning environment for welding. Part 1: Product modelling, 3
An integrated design and planning environment for welding. Part 2: Process planning, 9
Work-in-progress
Simulation as an essential tool for advanced manufacturing technology problems, 412
World Wide Web
Synchronized system for "Design for X" guidelines over the WWW, 71
An expert system of machining operation planning in Internet environment, 160
Distributed model management system for material flow simulation, 478
Woven fabric element
An energy based model for the flattening of woven fabrics, 312
WWW application
A new approach to CAM systems development for small and medium enterprises, 173
